

WATER SUPPLY.

TO THE EDITOR OF THE HERALD.
—In a recent article you assumed the discussion

question of water supply, more particularly as regards the Delaware River, to have been closed by Mr. Manning's report, in which he instanced the dam or weir on the Wissahickon, near Philadelphia, as evidence of the probability and sufficiency of such works as have been recommended by himself and other amateurs for Georgetown. Though now apparently to Mr. Manning, as pertaining to yourself to warrant a report being obtained from the electric telegraph, the character and objects of

relations at the Schuylkill were very well known to persons in the community—possibly even to some members of the late Water Commission; and it is probable that, even without waiting for the receipt of your geographic report, many others besides your correspondent would have written under the signature "Watson" which would have demonstrated the utter absence of similarity between the two cases.

question of the water supply of Sydney, and the general determination in favour of the plan recommended by the Water Commission, have not been recognised. A lot of those who have lately undertaken to write about the water supply of Sydney, and to insist on the necessity of the demolition, in succession, of their various projects, contributed to the spread of some of the

After the other the advocates of the various schemes presented by the Water Commission have helped to educate the public, if not themselves, up to appreciate the wisdom of their rejection. I need not dwell upon the certificates of mathematics, given by the University authorities at the public examination to the Warragamba project, nor say much of the proposals of the present City Engineer, who hopes to draw (by means of syphons that could be sunk in defiance of hydraulic laws) more water out of

...suppose that not even the original "Senex" (seemingly enjoying a green old age) can be of opinion that the water of George's River, below the present dam, is improved, after receiving into its twenty miles of a

lary, salt marshes, and salt pans, the drainage of the
Llanymynech and Prospect creeks, and the Wainman
creek (so strongly condemned by the Rev. W. B. Clark)
are likely to become (even if effectually dammed)
much better in quality than above the present
dams. Residents of Liverpool have abundantly testified
that it is there unsuitable for domestic consumption. I
add a few facts which came within the observation
of a casual visitor.

One little time ago, having had occasion to visit a ship-repairing works at Liverpool, while being shown over the works by the courteous and intelligent gentleman in charge, my attention was attracted by a number of little pyramids of a substance resembling salt, dotting the board of the engine-room, and the tarpaulin covering the engine. I found each pyramid to correspond with one of the tanks containing the water for use in the engine.

ing process of the manufacture (which is obtained by dipping from George's River, some distance above the falls), and I purchased myself of a few pieces of the deposit, of which I send you for the inspection of the curious. You will observe its effect in destroying the fibres of the tar-pinen. The feed-pipes of the machines are of iron, about $\frac{1}{4}$ th of an inch in thickness. I was informed that so rapid was the destruction of the iron by the salt held in solution

water, that it had been found necessary to use galvanized iron pipes, and further to protect these inside by use of japanning. I was shown some pipes which, after being exposed to the action of the water for about five months, were perfectly honey-combed, and reduced to the thickness of paper; and a small steel pin, used in the valve of the pump, was corroded to the extent of an eighth of an inch after being in use for about a month.

...which they only recovered after the use of the water of the River had been interdicted by a medical man in a warning that its continued use would probably prove a calamity; and without pausing to calculate the consumption necessary to produce this effect in an adult and to the supply of this water to the community, I became convinced that no person in his senses, acquainted with

While unanimous in nothing else, the advocates of various rival schemes have been singularly unanimous in avoiding any tangible criticism of the comprehensive plan of the Water Commission. The one tangible objection to it that has been made is that

would more than treble the estimate. A statement of character impugning the deliberate conclusions of a Select Committee—certainly gentlemen of fair repute and professional standing—would have needed to be well provided with evidence to deserve attention, but it is bound to rest merely on the assertion made offhandedly by a gentleman who himself has been prohibited the reliance to be placed on his criticisms, and who, at the same time that the *Paramatta dam* he

days to have been without any foundation whatsoever who misrepresents, or by ill considered opposition divert attention from, and interpose delay and dissension in the way of the adoption of the plans of the Water Commission, incur a very serious responsibility. Assuredly the plans will be carried out, offering as they do to supply the city and all its western suburbs with water of the highest quality, in quantity practically unlimited, drawn

with January.

WATER SUPPLY.

—♦—

TO THE EDITOR OF THE HERALD.

—Your leader in this day's *Herald*, on the subject of Water Supply, has induced me to peruse the report of the Engineer with some care, and I confess to the surprise which I observed what appears to me to be a want of maintenance with one of the primary laws of hydrostatics. The Reynolds.

is stated in the report that the average depth of the Botany watershed is 80 feet; that the sand contains fully one-quarter of its bulk of water—that for an area of 5660 acres, and 80 feet in depth, one-quarter of the cubic contents would be available water is set down at 30,274 million gallons.

to 30 feet in depth, from which the water is to be drawn (as to me) the hydrostatic fallacy exists. If the 10" syphon water from a depth of 80 feet, and it would be necessary to do so to exhaust the mine, and then and make them act, they would simply be 25 suction pipes, and only able to lift the water from a depth of some 25 to 32 feet out of each well. From

owner knows the difficulty of getting a satisfactory action of valves, &c. So that even 25 feet is probably the very maximum depth from which the syphon could draw the water. How then is the remaining 55 feet of water to be got at? It could only be done by erecting an engine, with all its attendant expenses, and separate establishment of pumps, engineer, stokers, &c., at each of the three points.

and the experiment which has been already tried with the cylinder which was sunk near the Randwick Road, which has been abandoned, the cylinder being left buried in the embankment, would seem to discourage a repetition of such project.

One would not willingly attribute so obvious a mistake to a gentleman as that to which I have referred to a gentleman occupying the position of City Engineer, and perhaps he may be able to explain how he proposes to obtain a

of 55 feet of water in each of his wells. If the tube wells were placed under Constitution Hill as proposed, there would only be a drainage area of some 200 or 500 acres above them, and if the syphons drain them to a depth of 25 feet, it would only give in the future an amount about 1-38 part of the quantity of water estimated by Mr. Bell; and this once exhausted, there would remain as permanently available a certain proportion of the water, but the question of the cost of the

I am, Sir, yours most obediently,
HYDROSTATICS.
 Sydney, January 7.

MURBAN RAILWAY ACCOMMODATION

TO THE EDITOR OF THE HERALD.
 Public attention being again directed to the question of suburban railway accommodation, I wish to suggest that in order to popularise the suburban portions of the line, it should be utilised to the utmost extent, it is requisite that additional stopping places should be provided. It is not, in my opinion, necessary that more station houses should be built, but simple platforms with awnings for protection

sun and rain, might with great advantage be erected at various points midway between the suburban stations, where convenience is very much required between Redfern and the present Newtown station; hence the decided preference manifested for 'bus accommodation by the New South Wales, who seem to have almost abandoned the railway for the purpose of access to the city.

Yours, &c.,
C. H. COLEMAN.

LEONARDE.—A meeting of the Borough Council of Leonardards was held on 3rd January. Present—A full quorum. The minutes of the previous meeting were read and confirmed. The following correspondence was laid on the table:—1. Land department, respecting the purchase of the Borough of Shellharbour, respecting eradication of weeds.

General. The report of the Finance Committee, recommending payment of accounts amounting to £63 4s 6d, was adopted. Thomas Jago and John Jago were accepted as bondsmen for the poundkeeper in the payment of £30. The Council then rose.—**SYDNEY HALL**, Council Clerk.

MERCANTILE AND MONEY ARTICLE

MERCANTILE AND MONEY MARKET.		TUESDAY EVENING.	
The Customs' revenue received to-day was as follows:—			
Spirits	£254 10 8
Wine (still)	120 2 0
Do. (sparkling)	85 0 0
Ale, porter, and beer (in wood)	26 10 0
Do. (in bottle)	81 0 0
Tobacco and snuff (human-slaughtered)	26 0 0
Cigars	32 15 0
Tea	91 11 8
Coffee and chicory	7 10 0
Unrefined sugar	2 0 0
Opium	23 18 0
Rice	14 2 1
Unrefined date	516 1 0

Harbour and light dues	831 0 8
Spent oil	40 0 8
Total	8726 18 8

The Leichhardt (s.), from Brisbane, brings 14,575 oz. gold.

Great dullness still prevails in the import market; no sales worth mentioning were reported. The damaged portion of the Auguste Keimer's cargo of tea was sold at auction by Messrs. Bradley, Newton, and Lamb, at from 24 7s. 6d. to 27 15s. per chest for congoas, and 25 10s. to 35s. per lb. for scented orange pekoes, net cash.

Our London telegram of the 4th instant quotes tin at £140 to £143 per ton.

In the Stock and Share market there was very little alteration this morning. The demand for bank stock continues active at about yesterday's quotations. Joint Stock changed hands at 123, and City at 9½, both closing dearer—13½ asked for Joint Stock, and 10½ for City. Australasian Steam were done at 17½, and wanted; Clarence and New England brought

little alteration this morning. The demand for bank stock continues active at about yesterday's quotations. Joint Stock changed hands at 12½, and City at 9½, both closing dearer—13½ asked for Joint Stock, and 10½ for City. Australasian Steam were done at 17½, and wanted; Clarence and New England brought 4 x d.; and 12 was offered for Hunter River. No sales of insurance stock. Debentures command extreme figures. New South Wales interminables found buyers at 105, City of

wanted; Clarence and New England brought 4 x 4; and 12 was offered for Hunter River. No sales of insurance stock. Debitures command extreme figures. New South Wales interminable found buyers at 105, City of Sydney sixes at 107 to 108.

Mr. Want reports having sold the following stations, viz.:— The Moura station, in the Leichardt district, Queensland, together with 1350 head of cattle, at 67s. 6d.; horses, stores, &c., at a valuation. The Hallford and Retreat stations, in the Darling Downs district, Queens-

land, together with 16,541 sheep at 9s. 6d., 100 head of cattle at 60s. per head; horses, stores, &c., at a valuation. The Boondooma station, in the Burnett district, Queensland, together with 22,840 sheep at 8s. 6d., 10000 cattle at 70s. per head, 320 acres purchased land at 20s. per acre; horses, stores, &c., at a valuation. The Llanillo station, in the Gyward district, New South Wales, together with 23,155

what we hear little is refer to; a few small parcels of new have been offering at 6s 3d without commanding any response, buyers not being inclined to offer more than 6s. Oats are quiet, the sales effected being trifling and unimportant; for common to good feeding we quote 3s 10d to 3s 5d. Maize moves but slowly at 2s 10d to 2s 10d; the arrival of two or three cargoes will probably have, however, have the effect of leading to more business. There is an impending inquiry for sunnats: we hear of some 5000 bags having

tin, ex Zoll) having been disposed of at prices rising from \$35 the ton, for yellow breeding to \$40 for finest white. Teas are getting scarce, and are being sold at \$100 for the common, ex consigna. ex Batavia, half-chests and boxes, at prices ranging from \$100 for common to 1 s. d. for good medium. 231 packages, ex consigna, of good quality, recently landed, the heaviest 10 1/2 d. and the lightest 10 d. Metals are steady, and a large quantity of tin is being reported from tin plate makers and advancing; the latter show a demand for the heavier 10 d. tin. Kerosene oil is firm, the news to the westward favourable. The oil has been sent forward via Sydney, but the advice regarding shipments here Melbourne have been anticipated by telegraph. Tobacco in good demand, and prices are rising. The timber we note the quotation of 20 logs order ex Yarra, at 25s to 35s 9d. Pine and beech logs brought 15s 3d to 2s 9d, and 5000 ft of 12 in. and 14 in. logs, 1000 ft of 16 in. and 18 in. logs, per foot; and 400 white Baltic deals, 11 x 3, were sold at \$45, 1070

and of these the Hawkins Hill line have the call. Browns are again advancing; 360s at 16s. Carroll Beards are firm; 360s was paid and 37s. asked. Cock, Atwood, and Dwyers changed hands at par. Beyers and Holttermans held for 70s., a figure purchasers were unwilling to pay. There was a better inquiry for Grenfell Consols, 15s. 3d. paid and offered. Krohmanns firm at 56s. Rapps also changed hands at yesterday's rate. Star of Peace rather easier; sales at 29s., sellers at 28s. Williams brought 19s. 6d. to 19s. 9d. Bathurst Gold, 13s. No buyers for

tin, and in copper sales were limited to Peak Downs at 5s to 5½, holders asking 5½.

Messrs. Fahey and Co. report having sold by public auction to-day—20 Marcolini, 16s. 9d. 100 Krohmanns, 55s.; 100 Bayers and Holtermanns, 69s.; 500 Hixen, Creighton and Beards, 17s. 6d.; 100 Williams, 18s. 9d.; 100 Day Springs, 6s. 3d.; 50 City of Sydney, 15s.; 100 Browns, 16s.; 10 Peak Downs (copper), 25 5d.; 100 Normandy, 10s. 6d.; 500 Blair Hill (tin), 1s.

The Secretary of the New South Wales Brokers' Association reports the following sales:—Krohmanns 55s. 9d., Star of Peace 29s., Rappa 17s. 9d., Monte Christo £75.

A company has been formed named the Major's Creek Gold Mining Co., to work a mundic reef at Major's Creek. Capital, £16,000. Directors, H. G.

A meeting of shareholders in the Rock Ponds Sluicing Co. was held yesterday, at Messrs. Mulholland and Wood's office, when the company was declared to be fully formed, and the following officers were elected, viz.:—Sydney Directors: Messrs. E. Goddard, G. Moore, J. D. Ewens, E. A. Baker, and G. H. Smith. Local Directors: Messrs. Cooke and Dawson. Auditors: Messrs. T. Ballard and R. N. Banks. At a meeting of directors held subsequently, Mr. John J. Wood was appointed legal manager. Two of the directors proceed at once to the mine to complete arrangements so that operations may at once be commenced.

The yield of the quartz from the Lucky Hit, as mentioned yesterday, was at the rate of 14 oz. 9 dwts. 20 grs. per ton.

9 lbs. of quartz from the Rebecca G M. Co., tested by Mr. Watt, yielded at the rate of 1 oz. 13 dwts. 4 grs. per ton.

Williams G. M. Co.: The managers advise having received the following report from the mining manager:—The south main drive has been extended an additional five feet during the week ending 2d instant, the stone keeping about the same level as the north main drive. The north main drive has not been worked this week, as the men having been employed at working on the

work was very much in the way. This is now completed, and the drive will be resumed as usual. The lode is still looking well. Both in the face and the stopes above this drive the stone keeps its usual appearance both in quantity and quality. Preparations are now completed for taking out stone at the north side of the shaft above the 200 feet level, and I have two stopes working on good stone carrying coarse gold. The holidays this week have

The third and best stage of advancement in "right property" arises from the institution of agriculture, the cultivation of the land by human labours with a view to the production of the annual or other crops of the soil. So gathering by right of ownership all the various fruits

himself have no operation whatever in the colonies at present, which appears also to have been subsequently raised and elaborately argued in Whicker v. Hume, 14 B. & C. 413, before the Lords Justices, in 1 Del. M. E. N. and, and House of Lords in 28 L. J., where numerous cases were cited but not this conclusive authority of Mayor of London v. East India Company. In vol. vi, p. 178, Flint v. Walker, as to equitable mortgages. In vol. vi, p. 181, Bank of Australia v. Brellat, as to the operation of the law from illegal covenants. In vol. vii, p. 77, Crown v. Clarke, as to Crown grants of waste lands by Colonial Governments, future the old, where numerous cases are cited, but not complied with or the Statute regulating, which is 1663, Devine v. Wilson, as to title under imperfect descriptions in Crown grants, but followed by long passages and exceptions. In vol. vi, p. 181, *see* *Flint v. Walker*, to what is included under the words, "cattle and stock."

mate increased happiness and prosperity of the next nation, if only these eternal principles of abstract moral duty, and unqualified truth, continue to guide the onward progress of the members of the Law Institute.

Gentlemen,—It is now exactly a year, since I addressed you from this place on the last Sunday evening in Teaneck, 1871. On that occasion I endeavored to impress upon the minds of my younger auditors the great importance of their continuing and extending, while few clerks, all the youthful studies of languages and mathematics into the wider spheres of the natural and applied sciences, and, especially, the grand old constitutional history of our country, as applied practically to our own colonial Government, so as to keep pace with the progress of education among their fellow-colonists,—not neglecting even poetry, especially Milton and Shakespeare, for relaxation in their leisure;—and especially to govern and cultivate the

choffer, or perhaps all; but as present arrangements exist, he has no choice, since there is only at least but a few, of a limited kind, and he either accept this or else go without. This would be so likely to happen were the option to be made so as to include other equally necessary and branches and classes, such as the *Herald* has, and judiciously pointed out, viz.—"prospected mining assayers."

This would not be so likely to occur were distinguishing educational marks or degrees of service order or value made available to the besides those that are now in use, obtaining vogue, but which in reality emanated entirely endowed, affiliated, and other incorporated by colleges. It is my firm belief than an extended

deep-thinking successful student to carry
offward his talent to greater success in
and unfolding Nature's hidden store-
riches, so that it may confer profit on those
probably less fortunate fellow-creatures,
because they have been to college and
certain degrees, that all education then
is really empty; but it is exactly the reverse
here in reality that the practical and useful
part of education only now begins to be
good or bad results and useful fruit to man-
kind. Those who quarrel about education,
names, and systems, or on secular or religious
are nothing better than firework enemies to
and happiness of their own country and the
expansion of sound, healthy, useful instruction.

It may truly be called the "elixir of life," and it is so called by the *British Medical Journal*.

Dr. MARVELLOUS COCOA.—The *Globe* says:—"Taylor & Co. have achieved a thorough success, every other Cocoa in the market. Native southerners, and a rare concentration of the purest strains, distinguish the Marvellous Cocoa above all others. It is not only palatable, but is a reliable and valuable beverage."

Nonpareil Cocoa.—This original preparation is a new and a rare concoction of pure cocoa, and is the property of the Marvellous Cocoa Co., Taylor, Brothers, under the able management of the Marvellous Cocoa Co., Taylor, Brothers, and the experience of the inventors. It is a rare and a rare degree of purity, and is the property of the Marvellous Cocoa Co., Taylor, Brothers, and the experience of the inventors. It is a rare and a rare degree of purity, and is the property of the Marvellous Cocoa Co., Taylor, Brothers, and the experience of the inventors.

The above articles are prepared exclusively by the Marvellous Cocoa Co., Taylor, Brothers, and the experience of the inventors. It is a rare and a rare degree of purity, and is the property of the Marvellous Cocoa Co., Taylor, Brothers, and the experience of the inventors.
